

# **Multi-Site Manager Overview**

VMS Manager is being upgraded to Multi-Site Manager, this document provides overview of features and functionality

# 1 Overview

As part of your Portal upgrade, VMS Manager is being replaced with the newly developed Multi-Site Manager application. Some functionality of VMS Manager will be replaced by Portal itself.

This document outlines the new multi-site management experience, through the Multi-Site Manager application and Portal.

Main functionality breakdown:

Multi-Site Manager:

- Add a domain
- Change the status of a domain
- View users with access to a domain
- Modify allocated emails of a domain
- Change the package type of a domain
- Change the applications available within Portal by domain
- Bulk site management
- Deleting a domain

Portal:

- Manage Portal branding
- Manage domain users

Removed functionality:

- “Change Status” simplified to “on/off”
- “Switch to” function removed
- “Custom “Under Construction”” page option
- Billing

## 2 Using Multi-Site Manager

Multi-Site Manager will be accessible through Advanced Tools or My Services areas in Portal, or through your Portal home page if used frequently (Recently Used Applications row).

Upon launching the Multi-Site Manager, users are able to do the following:

- Add/Manage domain hosting accounts on their plan
- Add/Manage users that have access to their hosting
- Allocate email addresses to the domains on their plan
- Manage Portal branding
- View current usage including mailboxes used, storage space used, bandwidth used by domain name and on their package as a whole as shown below
- Change the applications available to the domain upon Portal access (upcoming release)
- Change the status of a package on/off
- Access bulk management feature

The Multi-Site Manager dashboard shows:

- **Domain name**
  - Clicking on a domain in the dashboard directs to Advanced Tools area of Portal for that domain name to mimic the “Switch to” function. The admin also has the ability to add domains to their bulk plan.
- **Status**
  - Toggle for On/Off replaces the VMS Manager functions of Ok and Disable.
- **Email Accounts**
  - Email count comes off total package allotment.
- **Users assigned**
  - Shows list users assigned to the domain (usually only one). Clicking the user directs to User Access area of Portal where you can change user passwords, domain access and contact info.
- **Disk Usage for each domain hosting**
  - Computed daily.
- **Bandwidth Usage each domain hosting**
  - Computed daily.

\*\* Disk space and bandwidth are currently shared across all domains of the account. Total plan usage will be shown in each column as well such as 20mb of 300mb.

## 2.1 Adding Branding (Portal)

A Multi-Site admin has the ability to upload a logo that users on their account will see when logging into Portal.

Package	Status	Mailboxes (10/375)	Disk Usage (0/1200)	Bandwidth Usage (9,999/2,160,000)
Parked	<input checked="" type="checkbox"/>	2	0	159.18
Hosted	<input checked="" type="checkbox"/>	2	0	

The option to “Change Branding” will be shown in the Multi-Site Manager, however the button redirects users to the General Settings area of the Portal.

*Example of how the Portal would be updated with the logo uploaded.*

To upload a logo, the admin simply has to upload an image by dragging it to the interface or click to upload.

The logo would then replace the logo in the top left of the control panel and will be manageable from the General Settings area of Portal.

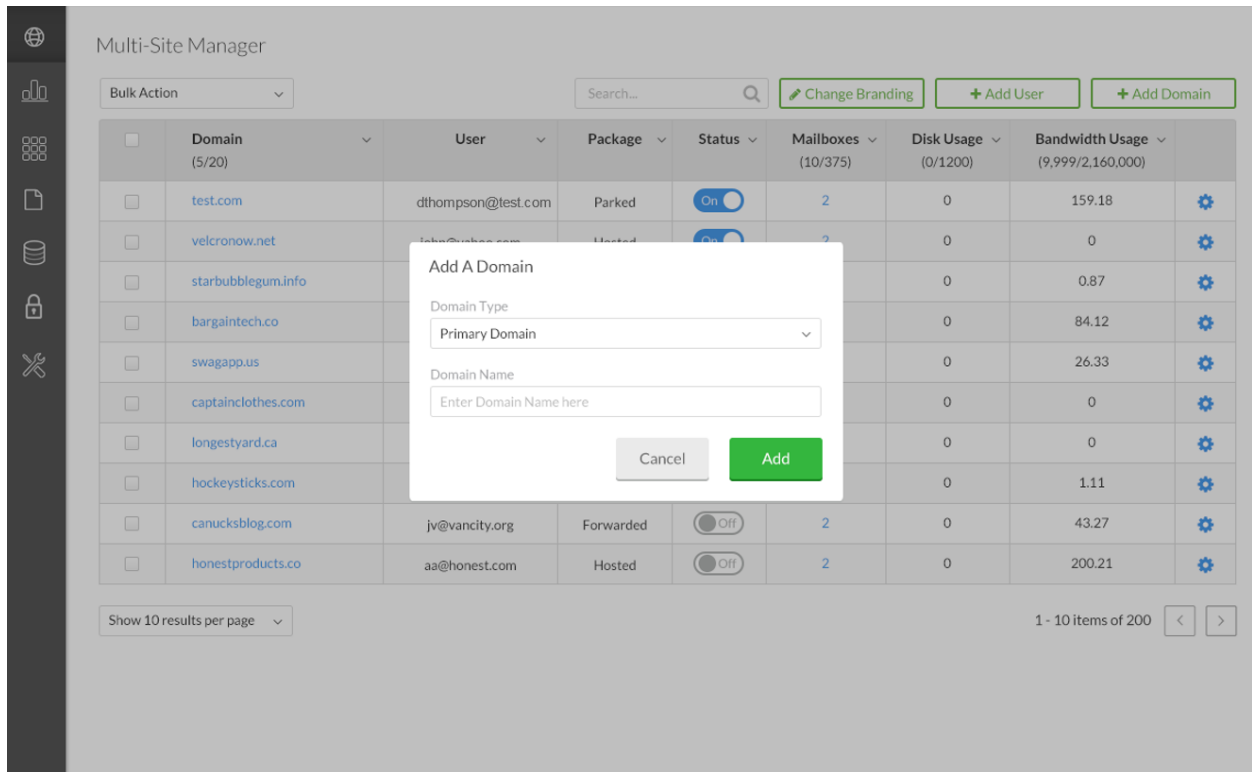

## 2.2 Adding a Domain Account (App)

Admins on a bulk plan need the ability to easily add domains/website hosting accounts to their plan. Currently VMS owners only have the ability to IMPORT domains that have already been added to our system via a signup system. Multi-Site Manager users will be able to add domains/website hosting accounts as follows:

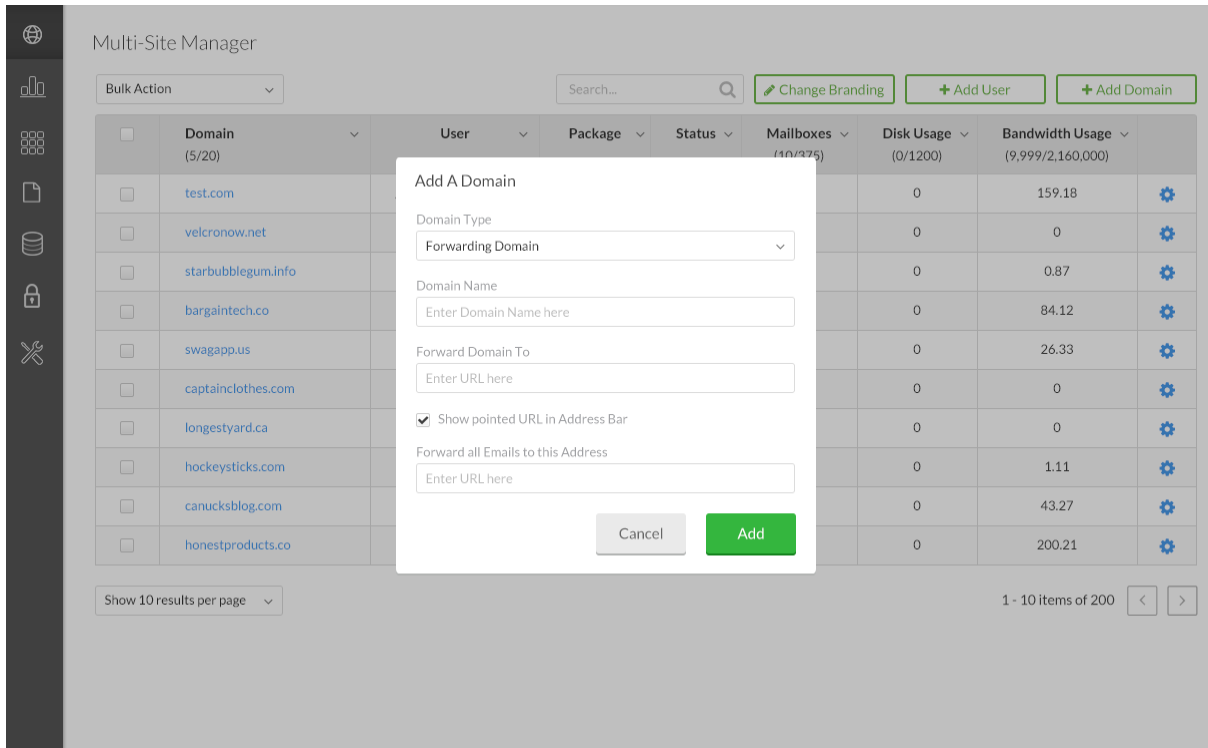

1. Admin clicks on Add Domain from their Multi-Site Manager/bulk plan dashboard.

2. Admin can then fill out site details such as:
  - a. Domain name
    - i. If domain already exists on system, it should prompt them to IMPORT it into their Multi-Site account (current functionality).
  - b. Domain Type whether it is Hosted, Parked or Forwarded
    - i. Should initially default to hosted, they get a standard hosting setup using a default hosting OS Template.
    - ii. If forwarded, admin should be prompted for where to redirect the domain
3. After adding the domain, the admin can then:
  - a. Assign number of email accounts to that site
  - b. Have the ability to turn the package on or off. Default should be on. Off would only typically be used if a customer doesn't pay the admin.

*Adding a Primary Domain – this is the main domain for sub hosting account that would have email as well.*

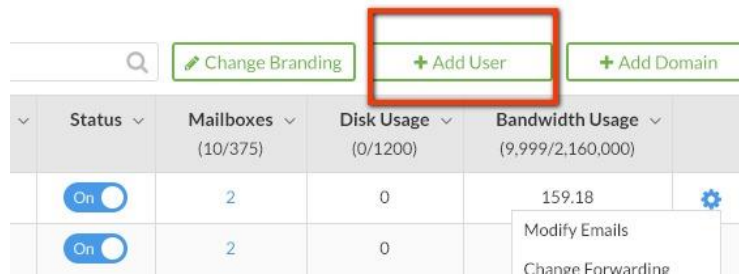

*Adding a Forwarding Domain – this shows how to setup the forwarding setup as well.*

Alternately, admins can add domains via My Services area of Portal as well and have it reflected in their Multi-Site Manager/Bulk plan.

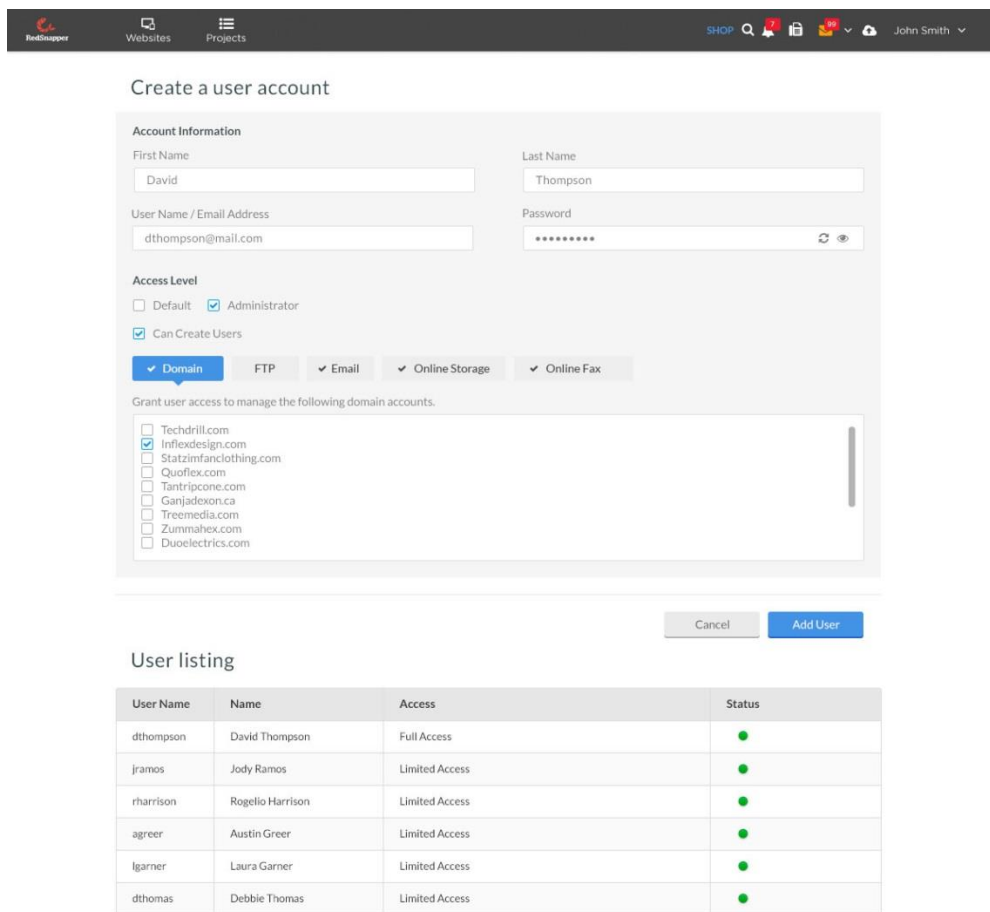

## 2.3 Managing Domain Users (Portal)

To give a customer access to their hosting plan, account admins can click Add User from the Multi-Site dashboard.

The Add User button will redirect admins to Portal’s User Access application where they can create a user account and assign them domain access to the account.

Any Multi-Site sub-user that logs into the Portal would then see the Multi-Site admin’s Portal branding and be able to access only their domain hosting account and apps using a default hosting OS Template.

**Note:** Multi-Site admins do not have the ability to assign individual custom application access for every domain on the multi-site package.

## 2.4 Bulk Site Management

From the Multi-Site dashboard, admins are able to perform bulk management functions. Admins can select multiple domains or select all, and perform the following bulk functions:

- Modify amount of allocated email accounts on multiple domains at once (e.g., set all selected domains to have 10 email accounts each)
- Change forwarding (e.g., set all or selected domains to forward to the same URL)
- Change package type (e.g., set all or selected domains to hosted, parked or forward)
- Change status (e.g., set all or selected domains to On or Off)
- Delete websites

## 2.5 Accessing Multi Site Management Options

Clicking on the gear icon in the Multi Site dashboard will give the multi-site admin options to do the following for each website on the Multi Site plan:

- Modify the amount of allocated email accounts for each domain website
- Setup/Change Forwarding for a domain if needed
- Change the individual website package type from Hosted, Parked or Forwarded
- Delete site

## 2.6 Modifying Allocated Emails for each site

To modify the amount of emails allocated to a site on the multi-site plan, the admin can click the gear icon and select Modify Emails. From here they can assign an amount of emails the site will get.

When the customer logs into their portal, they will only have access to create the same number of emails in their Mail Manager that the Multi-Site admin has assigned.

Admins should be able to modify this at any time. Alternately, admins can also use the Bulk settings to set the number of Email accounts for multiple domains on their plan at the same time.

The screenshot displays the Multi-Site Manager interface. At the top, there are navigation icons on the left and a header area with a search bar and buttons for 'Change Branding', '+ Add User', and '+ Add Domain'. Below this is a table with columns for Domain, User, Package, Status, Mailboxes, Disk Usage, and Bandwidth Usage. A modal dialog box titled 'Modify Number of Email Accounts' is open, showing a form to enter the number of accounts to add or subtract, with a 'Set to' dropdown and an 'Enter numbers here' input field. The dialog also shows 'Available email accounts: 320 out of 335' and 'Cancel' and 'Save' buttons.

Domain (5/20)	User	Package	Status	Mailboxes (10/375)	Disk Usage (0/1200)	Bandwidth Usage (9,999/2,160,000)
test.com	irina@test.com	Parked	On	2	0	159.18
velcronow.net	john@yahoo.com	Hosted	On	2	0	0
starbubblegum.info					0	0.87
bargaintech.co					0	84.12
swagapp.us					0	26.33
captainclothes.com					0	0
longestyard.ca					0	0
hockeysticks.com					0	1.11
canucksblog.com	jv@vancity.org	Forwarded	Off	2	0	43.27
honestproducts.co	aa@honest.com	Hosted	Off	2	0	200.21

## 2.7 Changing Site Package Type

Admins can also change the type of package for their domain websites on their multi-site plan. The package options are:

- Hosted – unlocks full web space
- Parked – standard domain parking
- Forwarding - option to forward domain to another domain

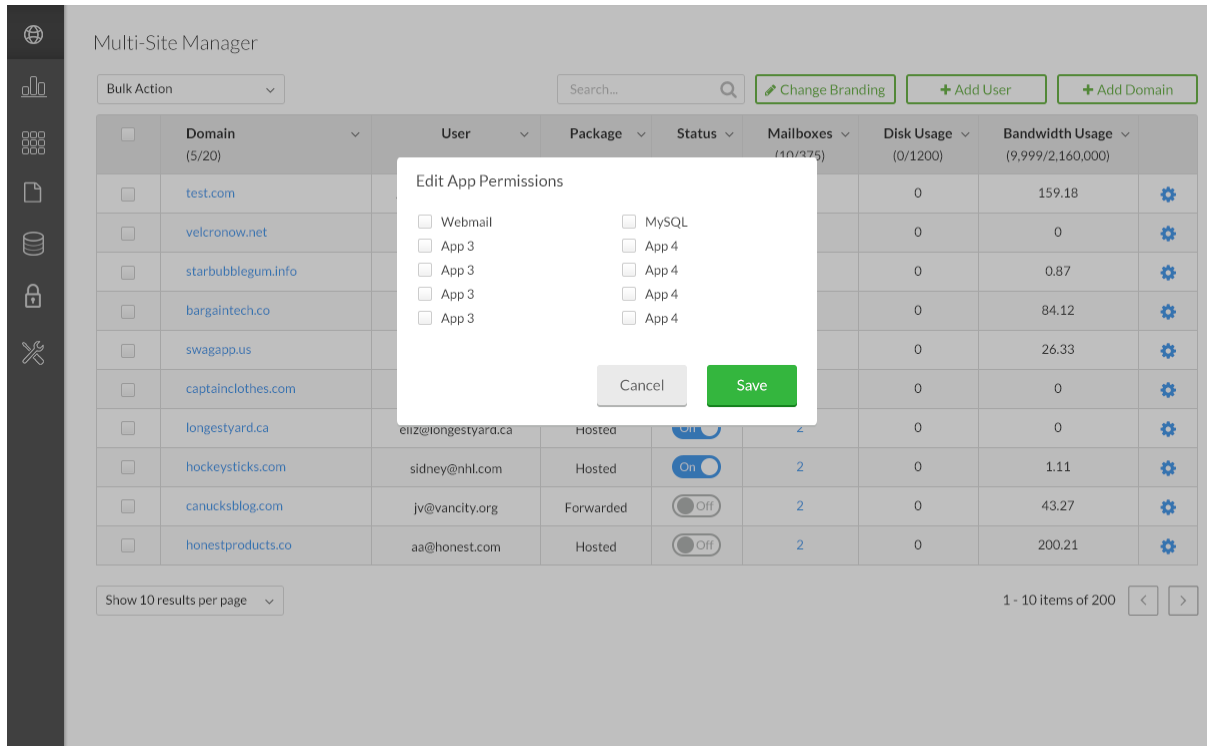

To change the package type, the admin can click the gear icon and choose Change Package Type which will present a modal window with their options.

Admins should be able to modify this at any time. Alternately, admins can also use the Bulk settings to set the package type for multiple domains on their plan at the same time.

The screenshot displays the Multi-Site Manager interface. At the top, there is a search bar and three buttons: 'Change Branding', '+ Add User', and '+ Add Domain'. Below this is a table with columns: Domain (5/20), User, Package, Status, Mailboxes (10/375), Disk Usage (0/1200), and Bandwidth Usage (9,999/2,160,000). The table lists several domains, including test.com, velcronow.net, starbubblegum.info, bargaintech.co, swagapp.us, captainclothes.com, longestyard.ca, hockeysticks.com, canucksblog.com, and honestproducts.co. A modal window titled 'Change Package Type' is open over the table, showing a warning: 'Changing from hosted to parked or forwarded will cause all email accounts to be permanently deleted.' Below the warning is a 'Set package to' dropdown menu with a 'Select' option, and 'Cancel' and 'Save' buttons.

## 2.8 Edit App Permissions

Each domain added to the Multi-Site plan will get a default osTemplate assigned to it that has all apps enabled. Multi-Site admins will have the ability to choose what applications the domain websites get access to when they log into the Portal.

To access the App Management piece, Multi-Site users can click the gear icon for the domain they want to manager and choose Edit App Permissions. A modal window should allow them to pick the applications the domain has access to. When the customer assigned to that domain logs into the Portal, they should only see the applications available to them as assigned by the user/reseller.

## 2.9 Disable Website

To disable a domain site on their multi-site plan (but not delete the files), admins can toggle the site status from On to Off from the Multi-Site dashboard. Doing this will invoke RRAD's VMS Disable function, taking the site down but not deleting any of the files.

## 2.10 Delete Website

To delete a website on the multi-site plan, admins can simply click the gear icon and choose Delete Site. This will completely remove the website hosting account and files from the platform.

Alternately, admins can also use the Bulk settings to delete multiple domains on their plan at the same time.

# 3 Updated My Services (Portal)

The new My Services features within Portal the following updated experience:

- Cleaner experience with less clutter
- Shortcuts to management applications and Shop areas to upgrade/renew packages.

Domains	wearehive.com	⚙️
Hosting and Websites	testonesite.io	⚙️
Online Fax	wearehive.com	⚙️
	testonesite.io	⚙️
	keepitreal.org	⚙️
	wavescap.me	⚙️

Domains	wearehive.com	⚙️
Hosting and Websites	testonesite.io	⚙️
Online Fax	wearehive.com	⚙️
	testonesite.io	⚙️
	keepitreal.org	⚙️
	wavescap.me	⚙️

Manage

Renew Domain

*Updated My Services gives a cleaner management interface with easy shortcuts. When in Domains, clicking Manage takes you to the Domain Manager app, Renew takes you to the Shop to renew your domain.*

Domains	<b>Basic</b> (2 of 5 domains used) <span>^</span> Upgrade
	wearehive.com
	testonesite.io
	<a href="#">Add Domain</a>
Hosting and Websites	<b>Basic</b> (1 of 5 domains used) <span>v</span> Upgrade
	<b>Enhanced</b> (7 of 10 domains used) <span>v</span> Upgrade
Online Fax	<b>Enhanced</b> (3 of 10 domains used) <span>v</span> Upgrade
	<b>Premium</b> (4 of 10 domains used) <span>^</span> Upgrade
	wearehive.com
	testonesite.io
	keepitreal.org
	wavescap.me
	<a href="#">Add Domain</a>

*Hosting and Websites is where you can also associate domains on your plan, add new domains or upgrade your package (shortcut to Shop section)*

The screenshot shows the 'Add A Domain' modal form. The background is a dimmed view of the domain management interface. The modal has the following fields:

- Domain Type:** A dropdown menu with 'Primary Domain' selected.
- Domain Name:** A text input field with the placeholder 'Enter Domain Name here'.
- Password:** A text input field with the placeholder 'Enter Password here'.
- Confirm Password:** A text input field with the placeholder 'Confirm Password here'.

At the bottom of the modal are two buttons: a grey 'Cancel' button and a green 'Add' button.

*When adding a domain to their plan, users can choose whether will the be primary domain or an add-on forwarding domain. The system will recognize if the domain is registered or not, if not, it will direct users to the Shop section to purchase. If it is a valid domain (regardless of where it was registered) it will be added to their plan.*

The screenshot displays a web portal interface for domain management. On the left, a sidebar contains navigation options: 'Domains', 'Hosting and Websites', and 'Online Fax'. The main content area shows a list of domains with their respective plans and upgrade options. A modal window titled 'Add A Domain' is open in the center, containing the following fields and options:

- Domain Type:** A dropdown menu currently set to 'Forwarding Domain'.
- Domain Name:** A text input field with the placeholder 'Enter Domain Name here'.
- Password:** A text input field with the placeholder 'Enter Password here'.
- Confirm Password:** A text input field with the placeholder 'Confirm Password here'.
- Forward Domain To:** A text input field with the placeholder 'Enter URL here'.
- Show pointed URL in Address Bar:** A checked checkbox.
- Forward all Emails to this Address:** A text input field with the placeholder 'Enter URL here'.

At the bottom of the modal are two buttons: 'Cancel' and 'Add'.

		testonesite.io	
		keepitreal.org	
		wavescap.me	
		Add Domain	

# 4 User Access Update (Portal)

Portal's User Access utility lists every user that the admin grants to access Portal, whether it's a sub-user accessing a domain, FTP, email, cloud storage or any other multi-user service that could require a sub-user to log into the Portal to access it.

**Create a user account**

**Account Information**

First Name:  Last Name:

User Name / Email Address:  Password:

**Access Level**

Default  Administrator

Can Create Users

**Domain** | FTP | Email | Online Storage | Online Fax

Grant user access to manage the following domain accounts.

- Techdrill.com
- Inflexdesign.com
- Statzifanclathing.com
- Quoflex.com
- Tantripcone.com
- Ganjadexon.ca
- Treemedia.com
- Zummahex.com
- Duolectrics.com

## User listing

User Name	Name	Access	Status
dthompson	David Thompson	Full Access	●
jramos	Jody Ramos	Limited Access	●
rharrison	Rogelio Harrison	Limited Access	●
agreer	Austin Greer	Limited Access	●
lgarner	Laura Garner	Limited Access	●
dthomas	Debbie Thomas	Limited Access	●

*Newly redesigned Portal User Access UI which gives a more straightforward user experience as well as ties in some of the Multi-Site Manager's user management capabilities.*

## 5 Discontinued Functionality from VMS Manager

The following functionality has been removed in the upgrade from VMS Manager to Multi-Site Manager:

- “Change Status” simplified to “on/off”
- “Switch to” function removed
- “Custom “Under Construction”” page option
- Billing

### 5.1 “Change Status” simplified to “on/off”

Multi-Site admins will be able to change a domain’s status between “on” and “off” options.

### 5.2 “Switch to” function removed

Multi-site admins no longer have the ability to “Switch to” a specific domain, as all required functionality has been added to Multi-Site Manager or Portal.

### 5.3 “Custom “Under Construction”” page option removed

Multi-site admins no longer have the ability to add a custom “Under Construction” page.

### 5.4 Billing settings

Multi-site admins will no longer have the ability to set up billing options, create packages or bill customers via payment gateways through Multi-Site Manager. Once you have been upgraded to Portal and Multi-Site Manager, any previously set billing settings will no longer be active.

If you used VMS Manager to use a payment gateway to bill customers, you will need to establish a new process to bill any customers. There are a number of simple third-party billing alternatives available online, such as FreshBooks (<https://www.freshbooks.com/>) or Wave Apps (<https://www.waveapps.com/>).
