

Full List of Deprecated Applications

Product/Application	Description	Replacement	Replacement Notes
Ad Manager	Ad Manager is an application that allowed users to include rotating banner ads on their website.	Online Presence Builder	Users can now create rotating header images in Online Presence Builder. Alternatively, you can use Google DoubleClick to create and manage online advertising.
Advanced Counter	Advanced Counter is an application that allowed users to include a visitor counter on a website.	Website Analytics	<p>The trend in web design has moved away from including a visible traffic counter on websites--businesses should be careful about what to quantify and display to website visitors and ensure it reflects positively on their business.</p> <p>Users can now see and analyze visitor data through Website Analytics within the Portal, or alternatively use third-party analytics tools including Google Analytics.</p>
Counter	Counter is a basic version of the AdvancedCounter application.	Website Analytics	<p>The trend in web design has moved away from including a visible traffic counter on websites--businesses should be careful about what to quantify and display to website visitors and ensure it reflects positively on their business.</p> <p>Users can now see and analyze visitor data through Website Analytics within the Portal, or alternatively use third-party analytics tools including Google Analytics.</p>
Disk Usage	Disk Usage shows customer how much storage space is occupied by their website.	Portal	Users can now view disk usage directly within the Portal interface. To view your Disk usage, log in to your Portal account, and click on the Websites tab. Disk usage is displayed in the right-hand margin on the Websites tab.
EasyMail Setup	Outdated version of EasyMail Setup.	EasyMail 3	Users will be able to create and manage email accounts on an updated version of EasyMail Setup. Access EasyMail Setup by selecting "Add an email" from your Quick Access menu within your Portal account, or by selecting "Advanced Tools" > "Email" > "EasyMail Setup".
File Manager (advanced)	File Manager is an outdated version of File Manager Pro - an application that allows users to view and manage website files.	File Manager Pro	Users can now manage website files using an updated version of File Manager: File Manager Pro. File Manager Pro allows you to drag and drop your files in an easy-to-use interface. Access File Manager Pro through "Advanced Tools" in your Portal.
Form Mail	Form Mail is an outdated CGI script that allowed users to add a contact form to their website.	Online Presence Builder	Users can easily add and manage contact forms on their website(s) using Online Presence Builder.
Guest Book	Guest Book allowed users to add a Guest Book element on their website.	Online Presence Builder	Websites typically no longer include guest books - instead some websites allow visitors to submit lead forms or leave comments on a blog.
PersonalMail	PersonalMail allowed users to manage their email account(s).	EasyMail 3	Users can use EasyMail Setup to easily create and manage email accounts.
Plug-in Scripts	Application that allowed users to install scripts such as Form Mail or Guest Book.	Online Presence Builder	Users can create and manager lead forms directly within Online Presence Builder. To add a form to a web page within Online Presence Builder, select "Elements" > "Forms" from your left-hand menu. Drag the form onto your web page, and double click to manage form settings.
Promote Site	Promote Site allowed users to submit their website to search engines.	OneList Pro	Search engine submission is no longer required. Today, search engines such as Google will automatically find and crawl websites to determine a page ranking and index in search results. Users may want to use an online marketing tool such as OneList to submit a consistent website and business listing across online directories.

Site Checker	Site Checker is an outdated application that allowed users to check their website for any broken links.	Third-party application	Users can use a third-party tool such as Google Webmaster Tools to check your website for any broken links. Fixing broken links is important in a website's accessibility and credibility to search engines.
WebsiteOS Preferences	WebsiteOS Preferences allowed users to manage Control Panel settings such as dashboard color or language.	Portal	Users can now manage preferences by accessing "My Account" > "General" within the Portal.
